Index Methodology. PWRMOXTR uses a proprietary methodology to trigger allocations between an equally weighted portfolio of stocks that are assembled according to the Sharpe Ratio Index (SHRPX) methodology and 1-3 year US Treasury-Bills. The SHRPX methodology employs a systematic approach to identify the five stocks in each of the ten S-Network US Large-Cap 500 sectors with the highest Sharpe Ratios. This methodology is designed to convey the benefits of high Sharpe Ratio, sector diversification and equal weighting. The tactical overlay for allocating between either stocks or bills is based on intermediate term linear weighted moving average crossovers .

Rebalancing. The underlying equity portfolio (SHRPX) rebalances quarterly, at the close of trading on the third Friday of the last month of each calendar quarter.

Index Data. Index values are disseminated in US dollars via the New York Stock Exchange on both a price only and total return basis.
